PROFESSIONAL EXPERIENCE

Texas A&M University, College Station, Texas	September 2022 – Present
Graduate Research Assistant	
- Built a few-shot whole slide image classification pipeline with explainable AI capability to investigate parameter-efficient fine-tuning of vision-language models for alcoholic liver disease diagnosis. - Proposed a neighborhood feature pooling layer that improved remote sensing image classification accuracy by up to 2.5 percentage points over standard pooling with near-zero added overhead. - Reduced the fine-tuning parameters of Transformer-based foundation models by over 10% compared to conventional adapters by developing a distribution-aware adaptation algorithm. - Raised the classification accuracy of a convolutional deep learning model by 7 percentage points by designing a time-frequency feature engineering pipeline for audio applications. - Established a cross-domain transfer learning benchmark showing that ImageNet-pretrained models outperform audio-pretrained models by 3 percentage points in acoustic classification. - Reduced ground truth data requirements by a factor of 15 for physiological time-series signals by developing physics-informed neural networks for cuffless blood pressure measurement. - Disseminated research findings through publications, presentations, and reports to funding agencies.	
Sharif University of Technology, Tehran, Iran	July 2019 – February 2021
Graduate Student Researcher	
- Designed an ECG + EDA electrical circuit for a wearable sensor (BLE SoC) with a 3× longer battery life compared to alternatives and delivered 94% mental stress detection accuracy across 18 participants.
